COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

COTTON PRODUCTION IN OKLAHOMA, 1928-1937

- By Counties -

Acreage planted to cotton in Oklahoma during the past 10 years has varied from 2,427,000 acres in 1935 to 4,263,000 acres in 1929. About 1,189,000 acres were removed under the terms of the first cotton program in 1933. The reduction in planted acreage from 1934 to 1937 resulted in large part from the Agricultural Adjustment Administration programs.

Yield per acre during the period has varied from 53 pounds in 1934 to 210 pounds in 1933. Cotton was nearly a complete failure in 1934 and also in 1936 due to extreme droughts which were state-wide. Yields were also below average in 1930 and 1935 which were years of less severe drought than 1934 and 1936. Weevil damage was unusually heavy in both 1928 and 1929, reducing yields in the eastern half of the State. Dry, hot weather which prevailed during each crop season from 1933 to 1937 tended to reduce weevil damage during that period.

Production of cotton is expressed in 500 pound equivalent gross weight bales and has varied from 290,000 bales in 1936 to 1,266,000 bales in 1933.

In general, acreage, yield, and production tended to vary in the counties in conformity with the State, although in some years significant departures occurred, particularly in yield per acre.

The estimates of production are based upon the ginnings within each county as reported to the U. S. Bureau of the Census with adjustments for cross-county movement of seed cotton.

The estimates of acreage planted are based upon the census enumerations of 1925, 1930, and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, inclusive, and current reports from crop reporters relating to cotton acreage in each year.

The estimates of yield per acre are based upon yields computed from acres and bales reported to the Bureau of the Census in Census years and upon current yield reports from crop reporters.

The estimates of acreage planted and of yield per acre needed to be reconciled with the estimates of production in such manner as to give a consistent series of estimates of acreage and of yield per acre.

K. D. Blood,
Agricultural Statistician.
